Profile

Motivated student skilled in Automotive Niche Writing, Python Programming, and Web Development. Also experienced in the use of ArchiCAD. Passionate about leveraging technology and creativity for impactful digital solutions.

Education

Kabete National Polytechnic,

Start Year: September 2024

Expected Graduation: September 2027

Pursuing: Diploma In Architecture

POWER LEARN PROJECT (PLP),

I am currently a student at PowerLearn Project (PLP), where I am actively building my skills in programming, web development, and digital technologies. My studies here are equipping me with practical experience and the latest industry knowledge to excel in today's tech landscape.

Skills

- Python Programming

- Web Development (HTML, CSS)

- ArchiCAD

- Automotive Content Writing

Projects

I developed a website using Google Sites dedicated to expanding knowledge and awareness about cars. This project serves as an accessible platform for both enthusiasts and newcomers,

providing educational content about the fundamentals of what a car is, how it works, and the various components involved. Beyond foundational knowledge, the website features detailed car reviews, offering honest assessments of different models to guide potential buyers and car lovers. Additionally, I regularly publish car blogs that cover industry news, maintenance tips, and technological innovations, fostering an informed and engaged automotive community.

This project reflects my passion for automotive writing and my commitment to making reliable, easy-to-understand car information available to everyone.
